

## **Forklift Training Programs Kamloops**

Forklift Training Programs Kamloops - Are you looking for a job as a driver of a forklift? Our regulatory-compliant mobile equipment operator training provides instruction in kinds of lift trucks, pre-shift inspection, fuel kinds and handling of fuels, and safe operation of a forklift. Hands-on, practical training assists people participating in obtaining essential operational skills. Course content consists of current rules governing the use of forklifts. Our proven forklift courses are meant to offer training on these kinds of trucks: counterbalanced forklift, powered pallet trucks and narrow isle forklift.

### **How to Safely Handle Loads**

Whilst the forklift is in use, do not raise or lower the forks. Loads should not extend above the backrest. This is because of the possibility of the load sliding back in the direction of the operator. Inspect for overhead obstacles and ensure there is enough clearance before raising a load. Stay away from overhead power lines. When the load is raised straight up, tilt it back slightly.

The lift truck is less stable if a load is in a raised position. Make sure that no one ever walks underneath the elevated fork. The operator must never leave the lift truck when the load is raised.

The forks must be level when handling pallets, and high enough to extend all the way into and below the load. The width of the forks must provide equal distribution of weight.

Set the brakes and chock the wheels before loading and unloading the truck. The floors must be strong enough to support the weight of both the load and the forklift. Fixed jacks can be installed to be able to support a semi-trailer that is not coupled to a tractor. The height of the entrance door should clear the height of the forklift by at least 5 cm. Mark edges of docks, rail cars or ramps and avoid them.

Do not stay in a lift truck for long periods without right ventilation. The inside of the truck must be well lighted and free of trash, loose objects and obstructions. Check for holes in the floor. The installation of nonslip material on the floor will help prevent slipping. Clear whatever obstacles from docks and dockplates and make sure surfaces are not oily or wet.

Never push or tow other vehicles with a lift truck.
